

Pros and cons ERP-connection

It is now standard to connect assistance systems to ERP systems. The ELAM system offers prepared interfaces for many commercially available ERP systems, which are used to automatically import order data and parts lists.

A note: our ELAM system can also be operated very well without an ERP system. In this case, you enter the BOMs directly into the ELAM system via administration. Jobs are then called up via scan code or manual input. Read our White Paper No. 1 [here](#).

Video ELAM 5 new generation

In our latest video, our colleague Malte Zapf explains which functions and extensions our ELAM 5 new generation offers. We describe our user-friendly user interface and the diverse potential of optimized production. Click on the video to get more information about our new generation. Do you need individual advice on site? Write to us via our [contact form](#).

ELAM becomes more and more international

It all started when some of our customers also wanted to equip their plants abroad with ELAM. "What has proven itself at home cannot be wrong abroad." We took on this task and made the software international and incorporated the national languages and specifics.

In addition to the 9 countries shown here, we are also represented with plants in the USA and Spain and the number is constantly growing.

Relocation of production and construction of foreign plants have become a strength/ core competence/ skill of Armbruster Engineering.
